The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/532,038

Applicant(s)

YOSHIDA, HIROYUKI

Examiner

FRED PRINCE

Art Unit

1797

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 November 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-5 and 7-14 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-5 and 7-14 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 02 December 2005 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/003)
- 4) ☐ Interview Summary (PTO-413)
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____
- Paper No(s)/Mail Date _____

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4, 7 and 11-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Nagamatsu et al. (US Pat No 6,143,176).

Nagamatsu et al. teach a method for producing methane gas from organic wastes, comprising: treating organic wastes with at least one of supercritical water and sub-critical water (11; col. 4, lines 46-67-col. 5, lines 1-12) to convert the organic wastes into low molecular weight substances; separating the treated substances into an oil phase, a water phase, and a solid phase, so that the water phase is collected (col. 5, lines 13-39); and subjecting the collected water phase to methane fermentation (4; col. 5, lines 35-44).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 5 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nagamatsu et al. ('176).

Nagamatsu et al. do not explicitly disclose the conversion treatment occurs continuously.

In any case, it is submitted that it is conventional in the art to treat organic wastes continuously in order to, for example, avoid treatment downtime associated with non-continuous treatment regimes.

Per claim 10, Nagamatsu et al. do not disclose 90% digestion efficiency.

In any case, it is submitted that it is known in the art to break down complex organics into low-molecular weight compounds prior to a methane fermentation stage in order to increase the efficiency and purity of the methane produced (see, for examples, US Pat No 4,722,741 to Hayes et al. and US Pat No 4,067,801 to Ishida et al.) and it is known in the art that residence time effects the degree of conversion, wherein conversion may be as high as 90% with a residence time of a few hours depending on the carbon load (see, for example, US Pat No 4,609,460 to Vellinga). Accordingly, it is submitted that it is well within the purview of the skilled artisan to utilize produce methane in such a way

that carbon digestion efficiency is at least 90% in order to, for example, degrade a given amount of carbon compounds.

5. Claims 8-9 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nagamatsu et al. ('176) in view of Harada et al. (US Pat No '220).

The method of Nagamatsu et al. is described above. Nagamatsu et al. do not disclose explicitly that the fatty acid formed is acetic acid or a fermentation time of 5 to 48 hours. In any case, Harada et al. disclose the concepts of forming acetic acid (col. 9, lines 12-21) during a conversion treatment of organic wastes in order to, for example, provide an easily degraded fatty acid during methane generation and fermenting the fatty acid for a time within the recited period (col. 5, lines 58-63) in order to, for example, ensure the highest degree of methane formation.

Accordingly, it would have been readily obvious for the skilled artisan to modify the method of Nagamatsu et al. such that it includes forming acetic acid during a conversion treatment of organic wastes in order to, for example, provide an easily degraded fatty acid during methane generation and fermenting the fatty acid for a time within the recited period in order to, for example, ensure the highest degree of methane formation. Per claim 14, Nagamatsu et al. do not explicitly disclose selective generation of the useful material based on temperature or time.

In event, Harada et al. disclose selective generation of the useful material based on temperature or time (col. 5, lines 20-30) in order to, for example, provide material suitable for methane fermentation.

Accordingly, it would have been readily obvious for the skilled artisan to have modified the method of Nagamatsu et al. such that it includes the well known concept of selective generation of the useful material based on temperature or time in order to, for example, provide material suitable for methane fermentation.

Response to Arguments

6. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection necessitated by applicant's amendment.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References are cited of interest to show the state of art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to FRED PRINCE whose telephone number is (571)272-1165. The examiner can normally be reached on Monday-Thursday, 6:30-4:00; alt. Fridays 6:30-3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Duane Smith can be reached on (571) 272-1166. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
